

Domain-Driven Design

My journey with DDD

DDD with F#

Blue book

DDD is not fit to any project

DDD terminology

- Ubiquitous language
- Core domain([strategic design](#))
- Bounded context
- Context map

What DDD values

- find your bounded context and keep refining it
- it will help if you focus on your core domain
- you should keep searching for a deeper model with the help of domain experts

Building blocks

- Entity
- Value object
- Aggregate
- Domain event
- Service
- (Repository)
- (Factory)

Event storming

[Event storming](#)

Other useful resources

- [Misadventures with Big Design Up Front](#)
